

THE „NO INFILL“ ARTIFICIAL GRASS

The environmental friendly artificial grass products from XL TURF have been established in the market as the 'no infill' artificial grass.

Through our longtime sporting activity we have succeeded in developing an artificial grass product that can be proudly named a real natural grass replacement. Since 2007 we have successfully installed over 100 football fields, leaving a line of thoroughly satisfied customers happy to recommend our products.

XL PRO

The product XL PRO has been specifically developed for Soccer but is also excellent for Rugby and American Football. With its specialized fiber configuration XL PRO provides excellent rotational resistance as well as natural ball behavior also in wet and cold conditions.

- ✓ **Certified acc. to DIN 18035-7, EN 15330-1**
Allows public subsidies for new construction or renovation.
- ✓ **Personal contribution**
The club has the possibility to assist us in the installation under our supervision
- ✓ **Little maintenance and recycling costs**
Compared to other artificial grass products

XL MULTI

XL MULTI has been specifically developed for small football fields and school playground areas.

The product provides the requested play characteristics for football courts but also multifunctional activities.

With the special tuft configuration the surface can be used all day and the low maintenance costs speak for themselves.

✓ **Production & Recycling**

No heavy metals are used in the production process of XL TURF products. Hazardous substances levels (incl. PAH) are far below the legal limits as XL TURF artificial grass does not use any infill material at all. Because of this recycling costs are also far below that of other products on the market.

✓ **Maintenance**

By not using infill material XL TURF artificial grass can be cleaned thoroughly. The artificial grass is kept at its best with monthly vacuuming so maintenance costs are very low. The lifetime of the product can be increased by simply replacing stress zones.

✓ **Winter Performance**

XL TURF artificial grass can easily be cleaned from snow. The Polyethylene-Fibers do not withhold humidity and therefore prevent the surface from freezing in cold conditions.
